Scott Jamieson, President, Jamieson Manufacturing Co., Inc.

**In fact, the finish
was too good!**

The major automotive manufacturer specified a 32 RMS finish on the connecting rods produced by our SR Series rotary transfer machine. The 7" wide Hardened Steel Box Way slide and 4000 Series spindle assembly produced 10 RMS!

We've sold hundreds of these machines over the last 35 years and never had a problem with the finish being too good.

If you want problems like these, call Russell T. Gilman for the answers.
